Bluetooth Wireless Optical Finger Mouse

Users' Manual

ote: Please read this manual carefully before use.

r some users who always carry their laptops around, it is annoying for them to take those essential peripherals, such as ce, mobile hard disks, optical drives and so on. Due to the inconvenience of the laptop touchpad, the mouse becomes a mmonly-used peripheral. Currently, those mice targeting laptop users feature portability and miniature, but they are fficult to grip, especially for men users.

ur product is designed to solve this problem: Wherever you are, it is easy to carry and grip!

Our product adopts an innovative concept: ergonomic design.

You can control the mouse with your thumb, index finger and middle finger.

When you are operating the wireless finger mouse, you are also allowed to write or type, hence reducing the time for erating the keyboard and mouse.
is light, easy to carry, and space saving.

With 1600DPI resolution and an USB interface, its weight is only 1/3-1/4 of that of a general optical mouse.

What makes it most appealing is that it is useful to prevent musculo-skeletal disorders. is 2.4G Wireless Finger Mouse can work on any surface, such as clothes and trousers. It is perfect for home, office use, d even for travel.

Power switch position:

pwoer switch

onnecting Instruction for Computer (support all Windows-system and Mac-system computers).
First find the bluetooth icon at the lower right corner in the computer screen and right click it.
Click "Adding Device".
Turn on the mouse power switch, install an AAA battery, and scroll the internal twinkling blue light.
See the mouse icon in the search page and double click it.

5. Connection completes here, but the mouse maybe doesn't work at this time. It requires shaking or pressing button until the mouse has response.

Note: An additional bluetooth adapter is required inserting in computer if your computer has no bluetooth function. After inserting, the same steps should be carried out according to the aforesaid operation. Nonetheless, if your laptop is equipped with bluetooth function, it's unable to apply an external bluetooth adapter simultaneously.

Connecting Instruction for Mobile Phone and Tablet (only support Windows system and android 4.0 system above)
1. Turn on the mouse power switch, install an AAA battery, and scroll the internal twinkling blue light.
2. Switch on bluetooth function of phone or tablet and click "searching device".
3. Search for the MOUSE device and click connecting.

Operations: (see below)

Scroll — Right button — Grip — Left button — Forefinger — Medius — Thumb

Place your middle finger at the grip area, because binding the mouse with your middle finger makes the operation more flexible and the position more accurate. Use your index finger to move the mouse smoothly and freely. Move the mouse's cursor over the interface. Use your thumb to control the "right button", "left button" and "scroll wheel".
