

BOBOVR D2

charging dock for quest2

Quest2 interface

Power interface

Magnetic interface

Adapter

from XIAOZHAI

Parameters Table

product name	D2 charging dock	
Operating Voltage	DC 5V \pm 0.3V	
Working current	Max in / out 3A	
Indicator light	Power Indicator	Powered on
	B2 battery pack charging light	B2 is charging
	Quest2 charging light	Quest2 is charging
buzzer	Beep	connection succeeded
	Continuous beeps	Connection failure
Smart charging	1. Automatically power off after the device is fully charged 2. If there are applications running in the background when Quest2 enters the dormant state, it will not automatically power off 3. After the automatic power off, it will re-check whether the device needs to be charged again after 24H	
safety protection	Support overcharge protection, over current protection, short circuit protection	
Operating temperature	0°C-40°C	

Installation and adjustment

1/ Put the black non-slip mat on the table with the concave side facing up. Put D2 on the rubber pad to prevent the charging base from being pulled up by the force of Quest2.

2/ Use the attached Type-C cable (or Quest2 official charging cable) to connect D2 to the charger. After the connection is successful, a beep will sound and the power light will be on. (It is recommended to use a charger with Type-C interface 5V-3A, which can increase the charging speed)

3/ Insert the adapter into the Type-C port of Quest 2, then put it on the charging base, start charging after a beep, and the indicator light will light up. Fully charged will automatically stop charging. (When using with BOBOVR M2 Pro, please remove the B2 battery on the Strap, otherwise it may cause the quest2 to fail to charge.)

4/ Put B2 into the charging slot of D2, and the indicator light will light up after a beep, indicating that charging starts. Charging will stop automatically when fully charged, and the indicator light will go out. (Charging B2 and Quest2 at the same time will extend the charging time)

5/ Comes with 2 controller storage pads, you can put it in your favorite position (such as on both sides of the charging dock), as the storage position of the daily

Precautions

- *Please use a charger that has safety certification and supports DC 5V3A or 5V2A for charging. It is strictly forbidden to use a charger that does not support DC 5V to charge;
- *The magnetic head is a dedicated interface, please do not use other brands of magnetic interface to match;
- *When charging the Quest 2 in sleep or power-on state, D2 will continue to supply power when there are background applications or WiFi working after it is fully charged.
- *D2 cannot charge the B2 attached to the M2 Pro, it can only be charged through the charging slot.
- *When D2 beeps continuously, please disconnect it and check if there is any foreign matter or short circuit at the connection port.
- *It is forbidden to throw the product into fire or water, and it is forbidden to expose to the sun or water;
- *It is forbidden to disassemble, hit hard, or drop the product without authorization;
- *When left unattended for a long time, please turn off the power and store in a dry environment at room temperature;
- *Please do not wash this product with water or use chemicals;
- *If you find peculiar smell or smoke, please disconnect the input power immediately and stop using it.
